ABOUT US

2.

Transpaco is a leading plastic and packaging manufacturer, focused on sustainable growth activities, satisfying the needs of its customers, share holders and employees.

Transpaco is committed to the protection of the environment and dedicated to the conversion and re-use of natural resources.

Transpaco Specialised Films (Pty) Ltd is a world class manufacturing facility located at 180 Barbara Road, Elandsfontein, Germiston, Gauteng, South Africa and is a wholly owned subsidiary of Transpaco Limited.

The company was established in 2004 specialising in the production of stretch film to supplement the then existing four Group Companies. Transpaco Specialised Films has enjoyed noteworthy organic growth since its inception through improvement and the correct capital utilization of new technology.

We currently have Nano **NANO57** layer technology a first of its kind in South Africa as well as Ultrathin **saveTwrap**, UltraEdge **saveTwrap**, +Thirty **saveTwrap** and Silagewrap **saveTwrap**.

We provide the most cost effective solution to safely palletise either by hand or machine. Transpaco Specialised Films (Pty) Ltd is ISO 22000:2018 Certified.

ESG Approach

3.

Transpaco is committed to advancing its sustainability objectives through a recognized and credible approach. During the year, we undertook a series of initiatives to embed environmental, social and governance (ESG) considerations more deeply into our operations and reporting practices.

A key milestone was the completion of a high-level double materiality assessment. This process enabled us to identify the ESG themes most relevant to our operations and stakeholders, based on both impact materiality and financial materiality considerations. The outcomes of this assessment now guide us in developing and rolling out ESG policies across the group which in turn will assist with our sustainability priorities and disclosures. To support implementation, we have adopted the Veriport ESG software platform as our group-wide tool for managing ESG data and performance. The platform allows for decentralised data capture at site level, while supporting group-level consolidation, analysis and reporting aligned with globally recognised standards. Our reporting is aligned with the Global Reporting Initiative

(GRI) Standards, which we consider to be a globally credible framework for sustainability disclosure.

As part of our commitment to climate related transparency, we have commenced the process of measuring our carbon footprint in accordance with the Greenhouse Gas Protocol, and Scope 1 and 2 emissions data is being compiled.

The actions outlined above reflect our continued efforts to build a resilient, responsible and future-facing business. Reporting on these efforts is a journey and we will seek to increase disclosure and reporting in due course.

ENVIRONMENTAL

CLIMATE CHANGE

The company continues to engage with stakeholders to dispel misconceptions about plastic packaging, while introducing paper bags to diversify material use in response to environmental expectations.

While formal group-level Greenhouse Gas targets are not yet in place, emissions tracking is being introduced and will inform future goal-setting.

GREENHOUSE GAS EMISSIONS

Transpaco is progressing toward comprehensive Greenhouse Gas reporting. Scope 1 and Scope 2 emissions data is being compiled through Veriport, and energy use and related emissions are tracked at divisional level.

ENERGY

Energy remains a priority theme across the group, especially within high-consumption divisions.

Energy data is now being captured in a centralised system via Veriport, with consumption measured at site level. This forms the foundation for ongoing performance tracking and reporting.

Energy reliability is a material operational concern due to South Africa's grid instability. Divisions are investigating backup systems such as solar to mitigate load-shedding and ensure continuity of supply.

WATER MANAGEMENT, CONSUMPTION AND WITHDRAWAL

Water stewardship is emerging as a priority for Transpaco, particularly for divisions where process water is used.

No comprehensive water consumption tracking is currently in place. However, divisions have begun identifying opportunities to improve water efficiency and reduce reliance on municipal sources.

No significant water discharges to the environment are reported. Process water discharge is managed through standard municipal connections.

RESOURCE USE AND CIRCULARITY

Transpaco extensively uses post-consumer recycled content and maintains internal recycling programmes as part of its long-term circularity approach.

The group sources a portion of its raw materials from recycled content, including paper and plastics. Quality assurance remains a key focus given variability in secondary input streams.

Processes ensure that packaging waste, cores, and paperboard offcuts are recovered and reprocessed within the group's supply chain.

Reintegration of production waste processes are in place to ensure recovery of packaging and offcuts where feasible in all our plastic production facilities.

All Transpaco businesses are members of the Extended Producer Responsibility initiative.

WASTE

Transpaco has adopted a formal Waste Management Policy that guides segregation, collection, and recycling. The group maintains partnerships with waste processors such as Mpact and monitors internal compliance monthly.

POLLUTION MANAGEMENT

Transpaco participates in industry working groups and applies environmentally responsible practices, such as the use of water-based adhesives and recycled materials, to mitigate pollution.

Pollution risks are mitigated through policies that prohibit the use of hazardous substances, favouring water-based and biodegradable alternatives. Emergency response procedures and safe storage requirements are enforced.

Transpaco maintains compliance with applicable environmental regulations and laws.

COMMUNITY

Community-related issues are addressed through our Corporate Social Responsibility initiatives, which include support for education and youth development. The group engages with local communities through targeted programmes.

Community engagement is driven at the operational level through support for local schools, youth initiatives, and environmental activities.

Transpaco supports social investment through the YES 4 Youth programme. These efforts are designed to promote education and improve community wellbeing.

PRODUCT AND CUSTOMER

Product information is provided in accordance with applicable legislation and industry norms. The company continues to improve customer-facing disclosures regarding material content and recyclability.

Compliance with applicable labelling and packaging standards is monitored at product level. Transpaco ensures that materials meet legal and client-specific requirements.

Customer privacy is protected through secure handling of data and information, in line with POPIA requirements. No substantiated complaints were received in the period under review.

PRODUCT RANGE

4.

NANO TECHNOLOGY

NANO57

NANO57 MACHINE ROLLS

The most advanced stretch film available for high speed automated wrapping systems.

+ THIRTY MACHINE ROLLS

An environmentally friendly roll developed to include 30% post-consumer recycled plastic.

saveTwrap

ULTRAEDGE

ULTRAEDGE saveTwrap

An extensive range of widths and micron providing a customised wrapping solution.

saveTwrap

ULTRATHIN

ULTRATHIN saveTwrap

Our most popular hand wrapping solution available in 400mm extended core only.

saveTwrap

SILAGE WRAP

UTILITY WRAP MACHINE ROLLS

A value for money wrapping solution for heavier loads.

MINI ROLLS

100mm wide rolls used for picture frames and other specialized wrapping applications.

(10 Rolls per Box)

HIGH PERFORMANCE HANDWRAP

For demanding pallet stabilisation standards able to withstand asymmetrical loads.
